SUBJECT: Steel Building Contractor/Erector - Recommendations

DATE: February 01, 2008

It is with great pleasure that I submit a reference for Commercial Steel Builders, LLC. I give this recommendation based on the quality and integrity of the personnel, sub-contractors he uses, and the Rockford Building erected on my site last year.

Mickey Wirth, runs a first class operation - period. He is one of the most sincere, honest, trustworthy individuals with integrity I have met.

His knowledge of the buildings that he helps design and submits for fabrication really sets him apart. He can help you design a more cost efficient building. He really understands the process and will help you any way he can. You will get more bang for your buck if you ask him what would be the most cost effective way to handle this.

Lets talk about my building. It is 9000 sq. ft. with 1500 open. We can service our heavy equipment, dozers, tractors, ect. all under a covered area. They helped design this based on asking us what our needs were. THANK YOU! After the building was completed, we determined we needed some additional open area for generators & waste oil tanks. It was designed, fabricated, and erected in a first class fashion. There is no way you will not know it is not part of the original building.

Based on my experience, I feel extremely comfortable recommending them with no reservation what so ever. You will get a great building that is done right and you can be proud of. Should you need further information or clarification please feel free to contact me.
